DETAILED ACTION

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11, drawn to a camera having a controller controlling a display to display mode displayed at a time of switching off the camera previously, classified in class 396, subclass 280.
- II. Claims 12-15, drawn to a camera having a detector dividing a photographic field into a plurality of photographic areas and a display to display in a divided form information about the photographic object in each of the divided areas of the photographic field, classified in class 396, subclass 234.
- III. Claims 16 and 17, drawn to a camera having a detector to detect whether a camera body postures horizontally or vertically, classified in class 396, subclass 50.

Inventions I, II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as storing or initializing a camera function responsive to the power switch. Invention II has separate utility such as measuring data within the photographic field using plural photometering areas. Finally,

Art Unit: 2851

invention III has separate utility including means for sensing the attitude of the camera. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for any single of Groups 1-3 is not required for any other Group, restriction for examination purposes as indicated is proper.
